

The LIST (Land Information System Tasmania) is a whole-of-government online infrastructure that helps you find and use information about land and property in Tasmania.

The Land Information System Tasmania (LIST) is managed by [Land Tasmania](#), a Division of Department of Primary Industries, Parks, Water and Environment ([DPIPWE](#)). The LIST has recently been redeveloped via the Tasmanian Government's award-winning [Spatial Information Foundations](#) project.

The key components of the LIST are:

LISTmap

LISTmap is a free, easy to use, online map application that allows people to view, create and share their own customised maps of Tasmania. LISTmap allows you to combine multiple layers (over 800) of information to create powerful images that communicate ideas, help with decision-making and encourage a better understanding of changes in the environment.

Properties and Titles

An online search facility that enables you to find and obtain a range of property and title documents and information, including documents such as Folio Text, Folio Plans, Schedule of Easements, Survey Notes, Property Information Reports and Property Sales.

LISTdata

LISTdata (formerly called the Data and Services Directory) is a free, easy to use online data portal that helps you discover, use and reuse Tasmanian location based information. It provides a central access point for discovering all options to connect to or download authoritative government data, including Open Data.

Common Operating Platform

The Common Operating Platform (COP) provides Tasmania's emergency service organisations a single mapped view of shared information for use in critical emergency incident planning and response activities.

LISTservices

Integrate government location based data layers directly into your business systems and applications via LIST's REST based web services.
